

Interconnect Parameter Analyzer and Time Domain Reflectometer

DESCRIPTION:

- Measures high-speed interconnects; extracts and verifies models by overlaying simulated and actual results
- Direct readout of inductance, capacitance, and impedance vs. time
- Fixtures to support various IC packages
- Instrument performance: 35 ps rise time, fully-differential, multi-channel TDR
- Enhanced accuracy TDR impedance measurements for results to within 1.5%
- Supports extraction of lumped, distributed, mixed, coupled, and lossy-line models

LOCATION: LNG, ROOM 111
